BOSTON GEAR AND BAUER GEAR MOTOR PROVIDE POWER TRANSMISSION SOLUTIONS FOR THE FOOD AND BEVERAGE INDUSTRY

Tightened federal regulations regarding food safety and hygiene in food processing and beverage industries has led producers to continue to adapt their equipment to meet those changing requirements.

The areas in production facilities where drive systems are located are often the areas that have the most stringent requirements for hygiene and sanitation, due to their proximity to the food product. The key to food safety is prevention of microbial contamination and bacteria growth. Equipment in these areas needs to be resistant to alkali or acid based cleaning agents and disinfectants.

For installations where the drive system is located at or above the food product, there is a higher risk of product contamination due to rigorous cleaning standards. For these installations special attention must be given to drive design & materials, so that bacterial growth on surfaces will be avoided. Drive systems with the most extreme protection are often utilized in these applications. Stainless steel exterior materials, rounded edges, domed crowns, and enhanced sealing are critical design features that will ensure long equipment life, the sustainability of your process and the safety of your product.

Some producers use highly caustic wash down solutions; others use high-pressure hot water. Equipment can also be exposed to process by-products such as sugar, seasonings, brines, or animal blood. Whatever challenges the integrity of your drive system, Altra has a solution for you. The family of gearing & motor products manufactured by Boston Gear and Bauer Gear Motor provide the level of protection needed for the harsh elements increasingly used in the prevention of microbial contamination and bacterial growth in hygiene sensitive environments.

New Accessories for SS700

- Economical Torque Arm (bracket-style kit) now available for all sizes
- 2-Bolt mount to either left or right Base Holes makes installation quick and easy

New Sizes of SS2000R Series - Helical Bevel

- Compact 2033R frame size with full compliment of mounting options
- Rugged 2073R frame size has expanded torque capacity and hollow output shaft bore sizes up to 2.000 inches

New Helical Multiplier

- C-Face mounts to any SS700, SS2000R or SS2000 product for more flexible ratio expansion
- Range of low ratios can be used as compact, stand-alone speed reducer for low reduction requirements

New AQT AquaTRUE™ Planetary Gearhead

- RediMount™ design for use with servo motors in precision applications
- 4 frame sizes with ratios from 3:1 thru 100:1

New SS Hiflex Helical Bevel Gear Motors

- 3 frame sizes with integrated motor options including asynchronous and permanent magnet
- Non-vented, totally-enclosed exterior with ability to integrate a brake or encoder

New SS AC Motor Design

- Welded and rounded conduit box for better sealing and washdown runoff
- Stainless slinger to protect shaft seal
- New size: 1/3 HP

SS700 Series Worm Gear Speed Reducers **A1**

Trusted Worm Gearing with a Revolutionary Smooth Exterior

IP69K

When ordered with high pressure washdown seal option*

NSF International Certified

Laser marked nameplate provides worry-free part identification while maintaining a smooth, unetched surface

Metal detectable covers for all hardware and counter bored holes prevent particle accumulation and pooling fluids to optimize washdown efficiency

Optional Stainless Steel output flange or torque arm mounting

Two-piece mounting base maintains standard 700 Series footprint and enables the unit to be washed down without trapping foreign matter under the reducer

Double lipped shaft seals ensure superior performance and leak resistance

Optional high pressure washdown seal available*

Available in hollow and solid output shafts

303 Stainless Steel output shafts

H1 Food grade Klubersynth UH1 6-460 maximizes torque capacity and efficiency

Large oil reservoir provides highly efficient heat dissipation and lubrication for longer operating life. Up to 20% more oil capacity than standard 700 series.

High strength bronze worm gear is straddle mounted between heavy-duty tapered roller bearings to increase thrust and overhung load capacities.

Integral input worm and shaft design made from high strength case hardened alloy steel

High pressure angle and proprietary polishing on worm provides greater operating efficiency

Polished matte finish maintains clean appearance throughout operation

The Original Domed Crown™ rounded housing prevents foreign matter adherence and fluid accumulation

316 Stainless Steel housing, motor flange and carrier to withstand tough washdown environments

Quill-Style Motor Mount or QC Quick-Connect Coupling Motor Mount Available

Flange features (2) jackbolt holes for easy motor dismount

Motor frame sizes 56C to 180TC

A1 SS700 Series Worm Gear Speed Reducers

Mounting Positions & Lubrication

Oil Levels For Typical Mounting Positions

(Examples shown for single-reduction models only)

NOTE: Double input seals are required for all positions except #1 and #5.

Enclosed Worm Gear Reducers Lubricant Available from Boston Gear

Ambient (Room) Temp.	Recommended Oil (or equivalent)	Viscosity Range SUS @ 100°F	ISO Viscosity Grade No.	Klubersynth UH1 6-460 Qt. Part No.
-20° to 225°F** (-29° to 107°C)	Klubersynth* UH1 6-460 Synthetic H1 Food Grade Oil	1950/2500	460	65159

* Synthetic recommendation is exclusively Klubersynth UH1 6-460, other lubricants will reduce performance ratings.

** The Klubersynth UH1 6-460 lubricant will perform at temperatures considerably higher than 225°F. However, the factory should always be consulted prior to operating at higher temperatures, as damage may occur to oil seals and other components.

Oil Capacity in Fluid Ounces

Unit Size	Positions				
	1	2	3	4	5 & 6
713	3.2	3.2	4.8	3.2	3.2
715	11.2	13.6	17.6	13.6	13.6
718	14.4	17.6	20.8	17.6	17.6
721	17.6	20.8	22.4	20.8	20.8
724	21.0	22.5	25.5	22.5	22.5
726	37.0	37.0	41.5	37.0	37.0
732	81.5	85.0	93.0	85.0	85.0

Double reduction stainless gearboxes require the primary and secondary boxes to be filled independently to their respective mounting position.

SS2000R Series Helical Bevel Gear Drives A2

Optional gasketed shaft cover available to eliminate food traps

Optional keyless **Tapered Bushing** (shown) provides longer shaft life and faster installation

303 Stainless steel shafts

Optional piloted output flange available

Unique **Mounting Registers** allow for quick precision alignment

Laser marked nameplate provide worry-free part identification while maintaining a smooth, unetched surface

Rare Earth Magnets near gear mesh provide automatic entrapment of wear debris ensuring longer life

The **Original Domed Crown™** unique rounded housing prevents foreign matter adherence and fluid accumulation

Stainless Steel Exterior
316 Castings
303/304 Machined Components

Integrated O-rings

NEMA or IEC C-Face motor input

Larger diameter oil fill/drain holes for faster oil changes

Polished matte finish maintains clean appearance throughout operation

3-Jaw Coupling

Optional high pressure washdown seal available*

Energy Efficient Design

With efficiency of 98% per gear mesh, Series 2000 helical bevel reducers are ideal for use in applications with:

- continuous or high duty cycle operations
- high-ratio reduction
- limited access applications where long life is a necessity

When looking into motor fan cover with gear drive in mounting position 1.

Mounting Positions & Lubrication

Lubrication

Klubersynth UH1 6-460 is recommended for the SS2000R Series gear drives for optimum performance. Normal full-load operating temperatures range between 130°F - 150°F. During initial break-in of the gear drive, higher than normal operating temperatures may result. All gear drives are supplied with UH1 6-460 synthetic oil (unless specified otherwise) with quantity listed below for standard mounting position 1 or to mounting specified at time of order. These gear drives are designed with internal features to

reduce the impact of metallic wear debris, which should increase maintenance intervals. Relubrication is recommended for 10,000 hours or more frequently when operating in highly contaminated environments. Satisfactory performance may be obtained in some applications with non-synthetic oils, but will require more frequent oil changes. Recommendations are based on input speeds of 1800 RPM nominal. For higher input speeds, consult factory.

RECOMMENDED LUBRICANT	Reducer Designation	Ambient (Room) Temperature	ISO Viscosity Grade No.	Viscosity Range SUS @ 100F	Part Number (Quart)	Comments
Klubersynth UH1 6-460 Synthetic	K	-20°F to +225°F (-29°C to 107°C)	460	1950/2500	65159	H1 Food-Grade

Notes: Upper temperature limit is dictated by reducer components and not the oil.

	Mounting Position					
	1	2	3	4	5	6

Plug B	—	Opt. Vent	Oil-Fill	Oil Drain	—	Oil-Fill
Plug C	Opt. Vent	Oil-Fill	Oil Drain	—	Oil Drain	Opt. Vent
Plug D	Oil Drain	Oil Drain	Opt. Vent	Oil-Fill	Oil Drain	Opt. Vent
Plug E	Oil Drain	Oil Drain	Opt. Vent	Oil-Fill	Opt. Vent	Oil Drain
Plug F	Opt. Vent	Oil-Fill	Oil Drain	—	Opt. Vent	Oil Drain

Notes:

Oil-Fill

Plugged from factory. Port used during regular maintenance intervals for Oil-Fill. Defines approximate oil-level during operation.

Opt. Vent

Plugged from factory. A 5psi pressure vent plug is supplied uninstalled with each product. Defines optional location for installation of that pressure vent.

Oil Drain

Plugged from factory. Port used during regular maintenance intervals for draining used oil. Re-plug prior to oil-fill.

Position 2*

Not preferred and not recommended as a Mounting Position

Position 4*

Consult factory for venting options.

All products supplied from factory lubed for Position 1 unless specified otherwise

Ratings shown reflect maximum gear capacity based on AGMA Standards (Service Factor = 1.0) with Klybersynth UH1 6-460.

For input speeds above 1750 RPM, do not exceed maximum listed input horsepower.

* Depending on the input option chosen, reducer ratios denoted with * may have an overall capacity lower than the values shown (values represent gear capacity). Contact factory for details.

Ratings shown reflect maximum gear capacity based on AGMA Standards (Service Factor = 1.0) with Klybersynth UH1 6-460.

For input speeds above 1750 RPM, do not exceed maximum listed input horsepower.

* Depending on the input option chosen, reducer ratios denoted with * may have an overall capacity lower than the values shown (values represent gear capacity). Contact factory for details.

Mounting Details

(Shown with Hollow Output Shaft Option)

Solid output shaft details shown on p. 23
Tapered bushing output shaft details shown on p. 24

Installation Aids

Mounting Registers (Standard Feature)

Mounting Registers on the 2000 Series products enable a simpler installation for Base Mounted units.

Use the following steps to assist in the alignment between the reducer output shaft and the shaft being driven (driven shaft).

1. Establish a reference edge that is parallel to the driven shaft using Dimension M from page 21 as the offset.
2. Bank Reference Face 3 of the reducer against your reference edge.
3. Use Reference Face 2 of the reducer for any fine angular (yaw) or lateral adjustments.

Contacting thumbscrews against Reference Face 2 is a clever method for higher precision alignment requirements.

Tapered Bushing Option

The Tapered Bushing is a valuable option that ensures a simple and secure installation for Shaft Mounted units.

Use the following steps to assist in the alignment between the reducer output shaft and the shaft being driven (driven shaft). See page 24 for additional reference.

1. Make a score mark on your Driven Shaft at a length equal to the Table 1 dimension from the mounting end.
2. Slide Support Bushing onto driven shaft, flange first, until the flange reaches the score mark & secure with clamp screw.
3. Mount Reducer onto Driven Shaft allowing it to slide through the Tapered Bushing on the opposite end.
Expect the Tapered Bushing to be pushed outward from the reducer as it expands inside the outer bore.
4. Align the holes between the Tapered Bushing and the Draw-Up Ring.
5. Using a mallet, tap the Tapered Bushing inward until the bolts are able to engage the Draw-Up Ring threads.
6. Tighten bolts evenly in sequence indicated in Bolt Tightening Sequence Table on page 24.
7. Readjust Support Bushing as needed to ensure full engagement of taper and re-secure clamp screw.

Table 1

	Used Length of Driven Shaft	
	(in)	(mm)

Ratings shown reflect maximum gear capacity based on AGMA Standards (Service Factor = 1.0) with Klybersynth UH1 6-460.

For input speeds above 1750 RPM, do not exceed maximum listed input horsepower.

Not recommended for use in applications with repetitive vibrational or impact loading.

SS2000 Series Helical Inline Gear Drives **B1**

Laser marked nameplate provides worry-free part identification while maintaining a smooth, unetched surface

Integrated o-rings

3-Jaw Coupling

NEMA or IEC C-Face motor input with 3-Jaw coupling

Larger shaft diameters available

303 Stainless Steel Shaft

H1 Food grade Klubersynth UH1 6-460 maximizes torque capacity and efficiency

Unique **Mounting Registers** allow for quick precision alignment

The **Original Domed Crown™** unique rounded housing prevents foreign matter adherence and fluid accumulation

Field installable piloted output flange for mounting flexibility

Stainless Steel Exterior
316 Castings
303/304 Machined Components

Polished matte finish maintains clean appearance throughout operation

Optional high pressure washdown seal available*

Large diameter oil fill/drain holes for faster oil change

NEMA or IEC C-Face motor input with 3-Jaw coupling

Rare-Earth Magnets near gear mesh provide automatic entrapment of wear debris ensuring longer life

Energy Efficient Design

With efficiency of 98% per gear mesh, Series 2000 Inline Helical Gear Drives and Gear Motors are ideal for use in applications with:

- continuous or high duty cycle operations
- high-ratio reduction
- limited access applications where long life is a necessity

Mounting Positions & Lubrication

Lubrication

Klubersynth UH1 6-460 is recommended for the SS2000 Series gear drives for optimum performance. Normal full-load operating temperatures range between 130°F -150°F. During initial break-in of the gear drive, higher than normal operating temperatures may result. All gear drives are supplied with UH1 6-460 synthetic oil (unless specified otherwise) with quantity listed below for standard mounting position 1 or to mounting specified at time of order. These gear drives are designed with internal features to

reduce the impact of metallic wear debris, which should increase maintenance intervals. Relubrication is recommended for 10,000 hours or more frequently when operating in highly contaminated environments. Satisfactory performance may be obtained in some applications with non-synthetic oils, but will require more frequent oil changes. Recommendations are based on input speed of 1800 RPM nominal. For higher input speeds, consult factory.

RECOMMENDED LUBRICANT	Reducer Designation	Ambient (Room) Temperature	ISO Viscosity Grade No.	Viscosity Range SUS @ 100F	Part Number (Quart)	Comments
Klubersynth UH1 6-460 Synthetic	K	-20°F to +225°F (-29°C to 107°C)	460	1950/2500	65159	H1 Food-Grade

Notes: Upper temperature limit is dictated by reducer components and not the oil.

	Mounting Position					
	1	2	3	4	5	6

Ratings shown reflect maximum gear capacity based on AGMA standards (service factor = 1.0) with Klubersynth UH1-6-460.

For input speeds above 1750 RPM, Do not exceed maximum listed input horsepower.

* Depending on the input option chosen, reducer ratios denoted with * may have an overall capacity lower than the values shown (values represent gear capacity). Contact factory for details

Mounting Registers

Mounting Registers on the 2000 Series products enable a simpler installation for Base Mounted units.

Use the following steps to assist in the alignment between the reducer output shaft and the shaft being driven (driven shaft).

1. Establish a reference edge that is parallel to the driven shaft using dimension M on page 35 as the offset.
2. Bank Reference Face 2 of the reducer against your reference edge.
3. Use Reference Face 3 of the reducer for any fine angular (yaw) or lateral adjustments.

Contacting thumbscrews against Reference Face 2 or 3 is a clever method for finer adjustment of alignment.

MOUNTING REGISTERS

Single Stage Parallel Shaft Reduction (Stand-Alone or Prefix for other SS Product Families)

B2 SSHMF Series Helical Multiplier

Ordering Information

Stainless Steel Stand-Alone Helical Multiplier

Example: SSHMF2-1.5K-B5-B5

Table 1: Available Ratio-Input-Output Combinations

Ratio	Input	Output
1.5	B5	B5
2	B5	B5
	B7	B7
3	B5	B5
5	B5	B5
	B7	B7
7	B5	B5

Lubrication

All SSHMF Helical Multipliers are supplied as Lubricated for Life for maximum efficiency, maintenance-free operation. The small cavity design offers the ideal mix of heat dissipation and lubrication contact in all mounting configurations. Normal full load operating temperatures range between 130°F and 150°F. Recommendations are based on input speed of 1800 RPM nominal. For higher input speeds, consult factory.

RECOMMENDED LUBRICANT	Reducer Designation	Ambient (Room) Temperature	ISO Viscosity Grade No.	Viscosity Range SUS @ 100F	Part Number (Quart)	Comments
Klubersynth UH1 6-460 Synthetic	K	-20°F to +225°F (-29°C to 107°C)	460	1950/2500	65159	H1 Food-Grade

Notes: Upper temperature limit is dictated by reducer components and not the oil.

	250	7	1.55	1.46	365	358	375	750

Ratings shown reflect maximum gear capacity based on AGMA standards (service factor = 1.0) with Klubersynth UH1 6-460. Overhung Load is measured at the centerline of the output shaft projection and ratings are based on no thrust load applied. Ratings based on input speed of 1750 rpm.

Expanded Speed Reduction while Maintaining Operating Efficiency

High Efficiency, Quiet Operation Planetary Gearing

B3 SSFSP Series Planetary Multiplier

Ordering Information

Stainless Steel Stand - Alone Planetary Multiplier

Example: SSFSP-5A

Lubrication

All SSFSP Series Planetary Multipliers are supplied as Lubricated-for-Life for maximum efficiency, maintenance-free operation. The inherent design of planetary gearing is conducive to the use of grease as a lubricant, because the rotation of the sun and planet gears inside of the internal ring gear promotes even distribution of the lubricant and consistent recirculation. The lubricant we apply at the time of assembly is Klubersynth UH1 14-222 grease which has the characteristics shown below.

LUBRICANT	Type	Operating Temperature Range	Certifications	Comments
Klubersynth UH1 14-222	Synthetic Grease, NLGI2	-15F to +225F (-25C to +107C)	FDA 21CFR178.3570 compliant, NSF registered	H1 Food-Grade

Notes: Temperature limit is dictated by multiplier components and not the lubricant.

Sizing and Selection

Step 1: Select the required precision class and gearhead configuration (in-line or right angle).

Step 2: Select the proper gearhead using exact or general method.

For continuous duty applications, please contact Applications Engineering.

General Method:

Required Gearhead Torque(T_r)

$$(1) T_r = T_M \cdot i \cdot e$$

where:

T_M = continuous torque of motor

i = Gearhead ratio

e = efficiency of Gearhead

* Since many motors are capable of exceeding their continuous torque rating for extended lengths of time, the value for T_M will only provide a starting point for Gearhead selection. Only use the general method if the continuous motor rating is not exceeded in the application.

Exact Method

Motion Profile

t_n = time period n

n_{nm} = mean speed during time period t_n

T_n = torque during time period t_n

Mean input speed (n_m)

$$(2) n_m = \frac{n_{1m}t_1 + n_{2m}t_2 + n_{3m}t_3 + \dots + n_{nm}t_n}{t_t}$$

where $t_t = t_1 + t_2 + t_3 + \dots + t_n$

Equivalent torque (T_{EQ})

$$(3) T_{EQ} = \sqrt[8.7]{T_1^{8.7} \frac{n_{1m}t_1}{n_m t_t} + T_2^{8.7} \frac{n_{2m}t_2}{n_m t_t} + T_3^{8.7} \frac{n_{3m}t_3}{n_m t_t} + \dots + T_n^{8.7} \frac{n_{nm}t_n}{n_m t_t}}$$

Modified equivalent torque (T_{EQm})

$$(4) T_{EQm} = T_{EQ}/Q$$

where Q is:

Q	# of cycles/hr
1,0	>0
0,9	>1000
0,7	>2500
0,5	>5000

For applications > 10,000 cycles/hour or for continuous duty operation, please contact application engineering.

Stainless Steel True Planetary Gearhead

Example: AQT060-010-0-MMR725

Modifications

Micron offers many different customization options to allow customers to meet the unique challenges of their applications.

Simple modifications that usually have little or no impact to price and lead time

- Output shaft modifications (shorter length or smaller diameter)
- Output shaft modifications (longer length or larger diameter would be product dependent)
- Custom output shaft designs (spline shafts, tapped holes)
- Higher precision options
- New ratio combinations (three stage designs, new ratios)
- Custom greases (food grade, low temperature, vacuum prep)
- Stainless steel, nickel plating or paint options

Other modifications that may require volume or longer lead time

- Envelope-size reductions (shorter length or width)
- Machined and mounted output gears
- Heavy shock and vibration requirements
- White paper, ground-up designs

Tr = Rated output torque at rated speed for specific hours of life.

Specifications subject to change without notice.

T_{peak} = Allowable momentary peak torque for emergency stop or heavy shock loading.

J = Mass moment of inertia reflected to the input shaft (including pinion assembly).

T_r = Rated output torque at rated speed for specific hours of life.

T_{peak} = Allowable momentary peak torque for emergency stop or heavy shock loading.

J = Mass moment of inertia reflected to the input shaft (including pinion assembly).

Specifications subject to change without notice.

Installation

Mounting Instructions

1. Slide the provided sleeve into the hub and align the slot in the bushing with the slot in the hub.
2. Set the motor on a work surface or hold fixture with the output shaft facing straight up. If there is a key on the motor, remove it and align the keyway with the slot in the hub. Slide the gearhead down onto the motor shaft.
3. Rotate the hub to align the input housing access holes with the hub clamping bolts.
4. Using a torque wrench, tighten the hub bolts to the pre-torque value indicated in the table.
5. Bolt the motor to the gearhead with the bolts provided.
6. Gradually tighten the hub bolts in three steps, increasing the torque each time until reaching the final tightening torque in the table.
7. Incorrectly mounted motor and gearbox void the warranty

Hub Bolt Tightening Torques

Gearhead Model	Gearhead Frame Size	Pre-Tightening Torque		Final Tightening Torque	
		in.-lb.	[Nm]	in.-lb.	[Nm]
AquaTRUE™	060	2	0.2	39	4.4
	080	4	0.4	76	8.5
	120	16	1.8	316	36
	160	32	3.6	636	72

Gearhead must be mounted in vertical orientation.

Lubrication

All AQT Series Planetary Gearheads are supplied as Lubricated-for-Life for maximum efficiency, maintenance-free operation. The inherent design of planetary gearing is conducive to the use of grease as a lubricant, because the rotation of the sun and planet gears inside of the internal ring gear promotes even distribution of the lubricant and consistent recirculation. The lubricant we apply at the time of assembly is Lubriplate FGL-1 grease which has the characteristics shown below.

LUBRICANT	Type	Operating Temperature Range	Certifications	Comments
Klubersynth FGL-1	Mineral-base, NLGI Grade 1	0 to 360°F	NSF International H-1 Registered	H1 Food-Grade

Notes: Temperature limit is dictated by multiplier components and not the lubricant.

Fully-integrated, non-ventilated, highly efficient Gear Motor

**IP67/
IP69K**

Fully encapsulated brakes or encoders are available upon request

Sizing and Selection

1. Identify Output RPM, Output Torque and Duty Cycle required for application.
2. Identify any application constraints.
3. Use Performance charts (p.61-62) to select Model # that meets Output RPM, Output Torque and Duty Cycle
4. Build full part number (p.60) with mounting and feature preferences.
5. Use Specification tables (p.60) to identify electrical requirements for operation.
6. Ensure available envelope with Dimensions table (p.64).

Above tables based on 60Hz supply and ambient temperature of up to 40°C (104°F).

Ratings are thermally limited based on the duty cycle noted in accordance with EN 60034-1.

All continuous duty rated gearmotors have an efficiency rating of IE3

Intermittent duty defines the percentage of time over a 10 minute cycle that the gearmotor can be operating at full rated torque with the remainder of the cycle at dwell.

For operating conditions not listed above, please contact the factory.

Service factor > 1.0 for all values except those in italics font.

Above tables based on 60Hz supply and ambient temperature of up to 40°C (104°F).

Ratings are thermally limited based on the duty cycle noted in accordance with EN 60034-2.

All continuous duty rated gearmotors have an efficiency rating of IE5.

Intermittent duty defines the percentage of time over a 10 minute cycle that the gearmotor can be operating at full rated torque with the remainder of the cycle at dwell.

For operating conditions not listed above, please contact the factory.

Service factor > 1.0 for all values except those in italics font.

Contact the factory for recommendations of VFD Variable Frequency Drives suitable for use with permanent magnet motors.

Motor Options

Sustainable Performance Motor Design

- Smooth motor housing and graded surfaces promote water runoff and easy cleaning.
- Non-ventilated motor avoids contaminant dispersion common to fan-cooled models.
- ASM Asynchronous motor offer simple install and start-up for a wide range of applications, providing reliable, high efficiency operation.
- PMSM Permanent Magnet motors offer savings of up to 40% on energy consumption based on variation of loading common in many applications when utilized with a VFD. By using its turndown capability, the PMSM motor allows the user to consolidate a wide range of ratios into one stocked gearmotor and maintain high efficiency across the expanded RPM range.

Efficiency ASM; 1.5HP; IE3

Efficiency PMSM; 1.5HP; IE3

CleanConnect™ Plug Connector

- The CleanConnect™ stainless steel plug meets the toughest requirements for corrosion protection and allows rapid installation of the drive in a few easy steps.
- The stainless steel connector maintains the ingress protection of the drive. It ensures reliable connection without accidental detachment, along with a high IP67/IP69K protection rating.
- The associated power cable, as counterpart to the stainless steel plug, resists cleaning agents from pH2 to pH12 and can be assembled in any desired length.

Brake or Encoder Options

- Brake design is spring set and electro-mechanically released. Types include holding or dynamic. Spring-loaded pressure plate instantaneously releases when power is removed to lock the rotor shaft. Pressure plate automatically resets when power is restored.
- Encoder design is optical incremental. There are various options depending on the desired signal waveform and required resolution.
- Brakes or encoders are completely integrated into the motor housing, i.e. the high protection rating IP67/IP69K and the aseptic design are completely retained.
- Contact factory to add brake or encoder options. Customer must provide application details for review to reduce the risk of exceeding thermal limits.

Ratings are for continuous duty at Max Ambient Temperature of 40°C
TENV = Totally enclosed, non-ventilated
TEFC = Totally enclosed, fan-cooled

All motors are inverter-duty rated at Service Factor of 1.15
Motors can be run at 50 Hz with a derating factor applied.
Efficiency meets or exceeds NEMA MG 1-2016

Stainless conduit box thread adaptor 25mm X 1.5 to 1/2"
NPT available separately as Boston Gear item J22770

Dimensions

TENV Totally Enclosed, Non-Ventilated

TEFC Totally Enclosed, Fan-Cooled

End bell shown is 180TC and larger

Product Features

- Synthetic lip seal with stainless steel flinger provides superior protection for high pressure washdown conditions
- Pre-filled with NSF H1 food grade grease
- Cast stainless steel housing
- Laser marked
- M6 grease fitting

*CR=dynamic load rating, Co=static load rating.

SSFC Series - Insert (3 Jaw) Type Coupling

- 316 stainless steel with passivated finish
- Precision machined bore or solid hubs
- Three types of inserts for different service requirements
- No lubrication needed
- Stocked bores complete with keyway and stainless setscrew
- Custom bore sizes available on request

JS Series - Pin and Block Type Universal Joints

- Connect shafts at angles up to 30 degrees and speeds up to 2,000 RPM
- Precision machined bore or solid hubs
- Self-locking assembly rings (hubs 7/8" and larger)
- Riveted bearing pin (hubs 3/4" and smaller)
- Joint covers keep dirt/moisture out and lubricant in

SSC/CSSC/2SSC Series - Collars

- Setscrew, 1-piece clamp & 2-piece clamp styles for locking
- Setscrew type suitable for temps up to 800° F, ideal for autoclaved hygienic equipment
- Clamp type conform to OSHA with recessed screw heads, provide convenient adjusting and removal

SAO Series - Thrust Washers & Thrust Ball Bearings

- Hardened and ground surface
- Ideal as a radial bearing surface
- Negligible friction when used as a set with thrust bearing sandwiched between 2 thrust washers

Performance

- Oil-Impregnated Bost-Bronz – recommended for high torque loads, particularly at slower speeds.
- Oil-Resistant Synthetic Rubber – recommended when quietness is desired, particularly at motor speeds.
- Polyurethane – recommended where moderate to heavy shock loads are encountered.

*For uniform load.

Selection Procedure

1. From Table select Service Factor.
2. Determine Design Load
 $\text{Design HP} = \text{Application HP} \times \text{S.F.}$
 or
 $\text{Design Torque} = \text{Application Torque} \times \text{S.F.}$
3. Select coupling size from Load Rating Table which has a rating equal to or greater than the design load

COUPLING SERVICE FACTOR

Load Classification	Service Factor
Uniform	1
Moderate Shock	1.75
Heavy Shock	2.5

Installation & Maintenance

Alignment

Alignment of Boston couplings should be performed by the following steps to meet lateral and angular misalignment specifications below.

1. Align shafts and supports to give minimum lateral and angular misalignment.
2. Assemble coupling halves to shaft.
3. Slide couplings together and check lateral misalignment using straight edge and feeler gauge over coupling outside diameter. This should be within specifications below.
4. Lock couplings on shaft and check distance using feeler gauges between drive lug on one half and space between on other coupling half. Rotate coupling and check gap at a minimum of 3 other coupling positions. The difference between any two readings should be within specifications below.

Misalignment Tolerances

Coupling Series	Lateral	Angular
FC - Bronze Insert	.001	See Chart Below
FC - Urethane Insert	.002	
FC - Rubber Insert	.002	

FC Series ANGULAR MISALIGNMENT

Chart reflects maximum angular misalignment of 1-1/2° for rubber, 1° for urethane and 1/2° for bronze.

Maximum Reading Differential

Size	Rubber	Insert Urethane	Bronze
FC12	.033	.022	.011
FC15	.039	.026	.013
FC20	.053	.035	.018

FC30	.078	.052	.026
FC38	.097	.065	.032
FC45	.117	.078	.039

Performance & Selection

Boston Gear precision machined JS Series Universal Joints are designed for connecting shafts at angles up to 30 degrees and speeds up to 2000 RPM. All sizes are stocked with both solid and bored hubs.

Selection

Torque ratings may be calculated from data in tables. The tables indicate the Rated Static Torque (Lb. Ins.) and Speed-Angle factors suggested for various operating conditions.

The approximate service torque rating of a particular joint is obtained by dividing the Rated Static Torque by the appropriate Speed-Angle factor.

Selecting a universal to satisfy a specified torque requirement is also made convenient with the data provided.

The designated torque load should be multiplied by the appropriate Speed-Angle factor to obtain an equivalent static torque load.

A universal with a rated static torque equal to or greater than the calculated torque load would then be selected.

Example:

A pair of universal joints are desired to transmit 1/2 HP from one shaft running at 500 RPM to another located at an angle of 10 degrees (from a straight line).

The joints will be connected by an intermediate shaft and arranged to operate at equal angles of 5 degrees.

A Speed-Angle factor of 9 is indicated in the table for an operating angle of 5 degrees and a speed of 500 RPM.

$$\text{Torque Load} = \frac{63025 \times \text{HP}}{\text{RPM}} = \frac{63025 \times 1/2}{500} = 63 \text{ Lb. Ins.}$$

JS175 size stainless steel universals would be suggested for this application.

Speed-Angle Factors

*Approximate Hub Projection

†Each Kit contains (2) Boots and (4) Ties together with complete instructions for installation and lubrication.

**Style B includes bore only. Units without a B letter have a solid bore.

†† Assemble the boot to be positioned central to the joint.

The shape of the boot may vary from the image shown above.

Installation & Maintenance

Mounting

A single universal joint (rotating at uniform speed) operating at an angle will introduce periodic variations of angular velocity to the driven shaft. These cyclic speed fluctuations (two per revolution) cause vibration, higher shaft stresses and bearing loads which will be more severe with larger angles of operation.

The detrimental effects of these rotational deviations can be reduced, and uniform speed restored by using two joints (and an intermediate shaft) to connect shafts at an angle or misaligned in a parallel direction.

For connecting shafts in the same plane the joints should be arranged to operate at equal angles and with the bearing pins of the yokes on the intermediate shaft in line with each other.

Volume of Lubrication for Booted Joints

Size	Volume (Ozs.)	Size	Volume (Ozs.)	Size	Volume (Ozs.)
37	.4	100	2.0	250	25.0
50	.5	125	3.5	300	30.0
62	.75	150	4.5	400	50.1
75	1.0	175	7.0		
87	1.5	200	15.0		

NOTE: Joints should be initially lubricated with a 90 weight oil before being packed with grease.

Lubrication

PIN and BLOCK TYPE

These universal joints are not lubricated when shipped.

Many applications are considered severe when in harsh environments and when a combination of speed, dirt contamination and inaccessible locations make it impractical to maintain proper lubrication.

It is in these instances when the Boot Kits become a desirable alternative. For satisfactory performance, all booted joints should be used with a LITH-EP-000 grease for an ambient temperature range of 40° to 225°F.

Stainless Steel Bore Sizes from 1/8" to 2"

Stainless Steel Collars are Corrosion-Resistant and Non-Magnetic suitable for temperatures up to 800°F. Ideal for applications requiring hygienic cleanliness.

All Collars Complete with Standard Hollow Point Setscrews.

Load Data

Capacity is based on a standard steel, one-piece collar mounted with recommended screw torque on a lightly oiled shaft. Capacity is load to move collar .010". Data shown is for guidance only. In applications involving control of axial loads, capacity should be determined experimentally on actual parts involved.

Thrust Washers & Thrust Ball Bearing

Hardened Stainless Steel — SAO Series

For Light Loads

High Quality Hardened Steel Balls, retained in a nylon cage.

Hardened Thrust Washers, are ground both sides to provide smooth, flat, parallel ball raceway surfaces.

Quality and Number Of Balls assure high load carrying capacity.

Nylon Retainer assures minimum frictional losses.

Premier Industrial Company Leading Brands

OTHER PRODUCT SOLUTIONS FROM **ALTRA MOTION**

Our comprehensive product offerings include various types of clutches and brakes, overrunning clutches, engineered bearing assemblies, gearing and gear motors along with linear motion products, belted drives, couplings, limit switches, precision motors, drives & controls, miniature motors and engine braking systems. With thousands of product solutions available, Altra provides true single source convenience while meeting specific customer requirements. Many major OEMs and end users prefer Altra products as their No. 1 choice for performance and reliability.
